KORG USA INC.

ELECTRIBE SX / ESX-1 Music Production Sampler Operating System Version 1.02 upgrade instructions.

Before you begin:

Back up all your Pattern and Song data via SmartMedia or MIDI before you update your Operating System! Refer to page 85 (SmartMedia) or page 92 (MIDI) of the ESX-1 Owner's Manual for more information.

And, as always, - never, ever turn off the power while updating your unit.

What you will need:

1) *A completely blank SmartMedia card, freshly formatted using the ESX-1*

2) *A SmartMedia reader/writer attached to your computer*

Updating the Operating System:

1) In the downloaded folder that contained this document, you will find three Operating System files:

ESX0101F.BFS / ESX0102N.BSS / ESX0102D.BDS

2) Copy these three files directly onto the SmartMedia. The files must not be copied while inside of a folder, or placed inside a folder on the SmartMedia. We refer to this as copying to the "root directory".   Be sure you copy the files to this root directory level.

3) Turn off the ESX-1, and set the Master Volume all the way down

4) Remove the SmartMedia card from your computer and place it into the ESX-1

5) While holding down both the [Cursor up] and [Cursor down] arrow keys, turn the power on.

6) When the "SysVerUp…Sure?" message appears in the display, press the blinking START/PAUSE key. (Press the STOP key to cancel).

7) The ESX-1 will begin updating the operating system automatically. The 16 step keys will light up in order to show the progress of the update. When the update is complete, the ESX-1 may instruct you to restart the unit.

Enjoy your updated ELECTRIBE SX !
